### TECHNICAL BULLETIN

Date: 22/09/2010 – Version 2

Bulletin No: J18

#### Pastry Glaze Using Pastry Glaze p/n 62564

#### Recipe:

16% dry mix to 84% Boiling Water

#### To make a 1 Kg batch, make up as follows:

160g dry mix to 840g Boiling water

#### Method:

1. Add the boiling water to the dry powder and whisk well until completely dissolved.
2. The glaze can be used immediately and can be applied to pastry by brushing or spraying.
3. The glaze can be used prior to and after baking.

#### GENERAL HINTS FOR USING PASTRY GLAZES:

- 1) Store the dry glaze in cool, dry conditions. Open each container as required, resealing after use.
- 2) Add the glaze evenly to water, agitating with a whisk to ensure that all lumps are broken up. Larger amounts will need a mechanical mixer.
- 3) Do not allow glaze solutions to rest in spraying lines for long periods without use as the glaze may set and cause jet blockage. Spraying apparatus should be cleaned thoroughly after use.
- 4) Glaze solutions should be made up in quantities as required. Glaze solutions should be kept in a cool place and covered against sunlight to avoid spoilage and discolouration.
- 5) The pastry to be glazed should be free of dusting flour to give a good surface finish.
- 6) If product has been frozen the pastry needs to be tempered before glazing. This is to remove all ice crystals. If not removed, it may prevent good adhesion and also delamination of the glaze.
